

Disclaimer

The following report(s) provides findings from an FDA-initiated query using Sentinel. While Sentinel queries may be undertaken to assess potential medical product safety risks, they may also be initiated for various other reasons. Some examples include determining a rate or count of an identified health outcome of interest, examining medical product use, exploring the feasibility of future, more detailed analyses within Sentinel, and seeking to better understand Sentinel capabilities.

Data obtained through Sentinel are intended to complement other types of evidence such as preclinical studies, clinical trials, postmarket studies, and adverse event reports, all of which are used by FDA to inform regulatory decisions regarding medical product safety. The information contained in this report is provided as part of FDA's commitment to place knowledge acquired from Sentinel in the public domain as soon as possible. Any public health actions taken by FDA regarding products involved in Sentinel queries will continue to be communicated through existing channels.

FDA wants to emphasize that the fact that FDA has initiated a query involving a medical product and is reporting findings related to that query does not mean that FDA is suggesting health care practitioners should change their prescribing practices for the medical product or that patients taking the medical product should stop using it. Patients who have questions about the use of an identified medical product should contact their health care practitioners.

The following report contains a description of the request, request specifications, and results from the modular program run(s).

Overview - Report 2 of 7

Request ID: cder_mpl2p_wp001_nsdp_v01

Report Description: This report investigated the association between new continuous or extended combined oral contraceptive (COC) use and venous thromboembolism (VTE), with new cyclic COC use as the comparison exposure. Strict incidence critiera was used to define new use of the exposure and comparator drugs. Report 1 contains the primary analysis of the request, and reports 3-7 contain results from additional sensitivity analyses with varying stroke definitions, follow-up periods, or exposure groups.

Data Source: Data from May 22, 2007 to September 30, 2015 from 11 Data Partners contributing to the Sentinel Distributed Database were included in this report. This request was distributed to Data Partners on March 28, 2017. Please note that five Data Partners were excluded from this report because their propensity score models did not fully converge.

Sentinel Modular Program Tool: Cohort Identification and Descriptive Analysis (CIDA) tool, Version 3.3.1, and a Rapid Analytic Development and Response (RADaR) module

Study Design: This study used a retrospective new-user cohort design.

Exposure and Comparator: The exposure of interest was new continuous or extended COC use and the comparator of interest was new cyclic COC use. The exposure and comparator drugs were defined using National Drug Codes (NDCs). For a list of generic and brand names used to define the exposure and comparator drugs, please see Appendices A and B.

Cohort Eligibility Criteria: Females aged 18 to 50 years with continuous enrollment in plans with both medical and drug coverage for at least 183 days before exposure initiation, during which gaps in coverage of up to 45 days were allowed, were eligible to be included in the cohort. New use was defined as no use of any combined hormonal contraceptives in the previous 183 days. Patients were excluded from the cohort if they had evidence of anticoagulant use, malignant cancer, chemotherapy or radiation use, pregnancy and post-partum status (defined as 42 days after delivery date), transplant and complications, organ failure, human immunodeficiency virus, or VTE in the 183 days prior to exposure initiation. Anticoagulant use was defined using NDCs (see Appendix C for list of generic and brand names) and the remaining exclusions were defined using International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) diagnosis and procedure codes and Current Procedural Terminology, Fourth Edition (CPT-4) codes (see Appendix D).

Pregnancy Identification: A previously-validated algorithm¹ from Sentinel's Medication Exposure in Pregnancy Risk Evaluation Program (MEPREP) was used to identify pregnancies with live birth deliveries within the study cohort. This algorithm used pre-/post-term delivery codes that occurred within 7 days of a delivery date in the inpatient care setting to determine a pregnancy duration. In absence of pre-/post-term codes, pregnancy duration was set to 273 days. Please see Appendix E for more details about this algorithm and for a list of delivery codes defined using ICD-9-CM diagnosis and procedure codes and CPT-4 codes.

Follow-up: Follow-up time was determined by the length of the exposure episodes. Exposure episode lengths were defined using outpatient pharmacy dispensing days supplied to create a window of continuous exposure. Exposure episodes were considered continuous if gaps in days supplied were 30 days or less. The end date of each exposure episode was then extended by 30 additional days. Follow-up began on the first day of exposure initiation and continued until the first occurrence of any of the following: 1) an outcome (VTE) diagnosis code; 2) a dispensing of the comparator drug, a non-oral combined contraceptive or a progestin-only contraceptive; 3) livebirth delivery code; 4) pregnancy start date; 5) disenrollment; 6) disenrollment due to death; 7) end of exposure episode; or 8) end of query period (September 30, 2015). Only the first valid exposure episode that occurred during the study period was included per patient.

Overview - Report 2 of 7

Outcome of Interest: VTE outcomes were identified in inpatient encounters and were defined using ICD-9-CM diagnosis codes (see Appendix F). Exposure episodes were excluded if an outcome occurred on the day of exposure initiation.

Propensity Score Estimation: The following covariates were assessed during the baseline period and were included in the propensity score: age, year, comorbidity score, health service utilization, drug utilization, and the following drug use and medical condition categories: use of any non-study hormonal contraceptive, use of the other study group drug, gynecological conditions, hypercoagulable states and coagulation defects, cardiovascular and metabolic conditions, cardiac conditions, venous catheterization, renal conditions, inflammatory conditions, obesity and overweight, tobacco use, immobility, and surgery. For a more detailed list of the conditions included in these covariate categories and codes used to define covariates, please see Appendices G, H, and I. Occurrences of these covariates were evaluated in the 183 days prior to exposure initiation. The Propensity Score Matching (PSM) tool was used to calculate the propensity scores and identify matched cohorts based on propensity scores. Propensity score estimation and matching was performed separately within each Data Partner site.

Five additional characteristics were also assessed at baseline, but were not included in the propensity score estimation models: sickle cell anemia, cystic fibrosis, cerebral palsy, thoracic outlet syndrome, and infectious diseases (see Appendices G and H).

Matching: The matching ratio for the propensity score was 1:1. Patients in the exposed and comparator cohorts were nearest neighbor matched without replacement, meaning that each comparator patient was matched one time, at most, to an exposed patient. The matching caliper was 0.010.

Effect Estimates and Subgroup Analyses: Cox proportional hazard regression models were used to estimate hazard ratios and corresponding 95% confidence intervals for the unmatched analysis and the 1:1 unconditional matched analysis. Subgroup analyses were conducted on ethinyl estradiol doses 20 mcg and 30 mcg doses.

See Appendix J for complete specifications for this request.

Limitations: 1) As with all observational studies, this evaluation was limited in its ability to control for all sources of potential bias. 2) The exposures, outcome, exclusions, episode truncation criteria, and covariates may have been misclassified due to imperfect algorithms used to identify them.

Notes: Please contact the Sentinel Operations Center Query Fulfillment Team (qf@sentinelsystem.org) for questions and to provide comments/suggestions for future enhancements to this document.

Glossary of Terms for Analyses Using Cohort Identification and Descriptive Analysis (CIDA) Tool*

Amount Supplied - number of units (pills, tablets, vials) dispensed. Net amount per NDC per dispensing.

Blackout Period - number of days at the beginning of a treatment episode that events are to be ignored. If an event occurs during the blackout period, the episode is excluded.

Care Setting - type of medical encounter or facility where the exposure, event, or condition code was recorded. Possible care settings are listed below. For laboratory results, possible care settings include: Emergency department (E), Home (H), Inpatient (I), Outpatient (O), or Unknown or Missing (U). Along with the Principal Diagnosis Indicator, this forms the Care Setting/PDX parameter.

Ambulatory Visit (AV) - includes visits at outpatient clinics, same-day surgeries, urgent care visits, and other same-day ambulatory hospital encounters. Excludes emergency department encounters.

Emergency Department (ED) - includes ED encounters that become inpatient stays (in which case inpatient stays would be a separate encounter). Excludes urgent care visits.

Inpatient Hospital Stay (IP) - includes all inpatient stays, same-day hospital discharges, hospital transfers, and acute hospital care where the discharge is after the admission date.

Non-Acute Institutional Stay (IS) - includes hospice, skilled nursing facility, rehab center, nursing home, residential, overnight non-hospital dialysis and other non-hospital stays.

Other Ambulatory Visit (OA) - includes other non-overnight AV encounters such as hospice visits, home health visits, skilled nursing facility visits, other non-hospital visits, as well as telemedicine, telephone and email consultations.

Cohort Definition (drug/exposure) - indicates how the cohort will be defined: (1) 01: Cohort includes only the first valid treatment episode during the query period; (2) 02: Cohort includes all valid treatment episodes during the query period; (3) 03: Cohort includes all valid treatment episodes during the query period until an event occurs.

Days Supplied - number of days supplied for all dispensings in qualifying treatment episodes.

Eligible Members - number of members eligible for an incident treatment episode (defined by the drug/exposure and event washout periods) with drug and medical coverage during the query period. Enrollment Gap - number of days allowed between two consecutive enrollment periods without breaking a "continuously enrolled" sequence.

Episodes - treatment episodes; length of episode is determined by days supplied in one dispensing or consecutive dispensings bridged by the episode gap.

Episode Gap - number of days allowed between two (or more) consecutive exposures (dispensings/procedures) to be considered the same treatment episode.

Event Deduplication - specifies how events are counted: (0) 0: Counts all occurrences of an HOI during an exposure episode; (1) 1: de-duplicates occurrences of the same HOI code and code type on the same day; (2) 2: de-duplicates occurrences of the same HOI group on the same day (e.g., de-duplicates at the group level).

Exposure Episode Length - number of days after exposure initiation that is considered "exposed time."

Exposure Extension Period - number of days post treatment period in which the outcomes/events are counted for a treatment episode. Extensions days are added after episode gaps have been bridged. **Lookback Period** - number of days wherein a member is required to have evidence of pre-existing condition (diagnosis/procedure/drug dispensing).

Maximum Episode Duration - truncates exposure episodes after a requester-specified number of exposed days. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Member-Years - sum of all days of enrollment with medical and drug coverage in the query period preceded by an exposure washout period all divided by 365.25.

Minimum Days Supplied - specifies a minimum number of days in length of the days supplied for the episode to be considered.

Minimum Episode Duration - specifies a minimum number of days in length of the episode for it to be considered. Applied after any gaps are bridged and extension days added to the length of the exposure episode.

Monitoring Period - used to define time periods of interest for both sequential analysis and simple cohort characterization requests.

Principal Diagnosis (PDX) - diagnosis or condition established to be chiefly responsible for admission of the patient to the hospital. 'P' = principal diagnosis, 'S' = secondary diagnosis, 'X' = unspecified diagnosis, '.' = blank. Along with the Care Setting values, forms the Caresetting/PDX parameter.

Query Period - period in which the modular program looks for exposures and outcomes of interest.

Treatment Episode Truncation Indicator - indicates whether the exposure episode will be truncated at the occurrence of a requester-specified code.

Washout Period (drug/exposure) - number of days a user is required to have no evidence of prior exposure (drug dispensing/procedure) and continuous drug and medical coverage prior to an incident treatment episode.

Washout Period (event/outcome) - number of days a user is required to have no evidence of a prior event (procedure/diagnosis) and continuous drug and medical coverage prior to an incident treatment episode.

Years at Risk - number of days supplied plus any episode gaps and exposure extension periods all divided by 365.25.

<u>Glossary of Terms for Analyses Using</u> Propensity Score Matching (PSM) Tool*

Covariate - requester defined binary variable to include in the propensity score estimation model (e.g., diabetes, heart failure, etc.) during requester-defined lookback period. Requester may also choose to add any of the following categorical, continuous, or count metrics to the propensity score estimation model:

1. Age (continuous)

2. Sex

3. Time period (i.e., monitoring period for sequential analyses)

4. Year of exposure

5. Comorbidity score

6. Medical utilization - number of inpatient stays

7. Medical utilization – number of institutional stays

8. Medical utilization - number of emergency department visits

9. Medical utilization - number of outpatient visits

10. Health care utilization - number of other ambulatory encounters (e.g., telemedicine, email consults)

11. Drug utilization – number of dispensings

12. Drug utilization – number of unique generics dispensed

13. Drug Utilization - number of unique drug classes dispensed

Covariate Evaluation Window - specified number of days relative to index date to evaluate the occurrence of covariates of interest. Note: members are required to have continuous enrollment during the covariate evaluation window, regardless of the value included in the "Continuous enrollment before exposure" field. **Mahalanobis Distance** - provides a measure of balance across all variables while accounting for their correlation.

Matching Caliper - maximum allowed difference in propensity scores between treatment and control patients. Requester may select any caliper (e.g., 0.01, 0.025, and 0.05).

Matching Ratio - patients in exposed and comparator groups are nearest neighbor matched by a 1:1 or 1:n (up to 10) matching ratio.

Matched Conditional and Unconditional Analysis - in a conditional matched analysis, a Cox model, stratified by Data Partner site and matched set, is run on the matched population. This can be done for both the both 1:1 and 1:n matched cohorts. In an unconditional analysis, a Cox model, stratified by Data Partner site only, is run on the matched population. This can be done for the 1:1 matched cohort only.

Propensity Score Stratification - option to stratify propensity scores based on requester-defined percentiles in the unmatched population. In a stratified analysis, a Cox model, stratified by Data Partner site, is run on the stratified population. Note that all patients identified in exposure and comparator cohorts are used in the analysis.

PSM Tool - performs effect estimation by comparing exposure propensity-score matched parallel new user cohorts. Propensity score estimation and matching are conducted within each Sentinel Data Partner site via distributed programming code; data are returned to the SOC, aggregated, and used to calculate effect estimates.

Subgroup Analysis - may be conducted using any requester-defined covariates. Subgroup analyses may be performed in the unmatched and the matched population.

Zero Cell Correction - indicator for whether to screen variables with a zero correction added to each cell in the confounder/outcome 2x2 table. Recommended when the number of exposed outcomes is fewer than 150.

Appendix G: List of Covariates included in Tables 1a and 1b

	Covariates for Propensity Score Estimation							
Covariate Group	Conditions/Descriptions							
	Exploratory laparotomy							
	Craniectomy/craniotomy							
	Lobectomy, hemispherectomy							
	Craniotomy for hypophysectomy, pituitary tumor							
	Removal of foreign body from brain							
	Surgical treatment of arteriovenous malformation							
	Surgical treatment brain aneurysm							
	Craniotomy, craniectomy							
	Incision, bone cortex, pelvis and/or hip (e.g. Osteomyelitis or bone abscess)							
	Procedures of bones and joints of hip and pelvis							
	Radical resection of bone tumor of hip/pelvis							
	Revision/reconstruction of hip and pelvis (e.g. Slipped femoral epiphysis, hip arthroplasty)							
	Open treatment of fracture/dislocation of hip/pelvis							
	Knee arthroplasty							
	Open treatment of fracture/dislocation of femur/knee							
	Revision of hip and knee replacement							
	Application of external fixator device (pins/wires, screws into bone), internal fixation							
	Open reduction of dislocation of hip or knee							
	Joint replacement lower extremity							
	Partial resection vertebral component							
	Spinal fusion: lateral extracavitary approach							
	Spinal fusion: anterior and posterior approach							
	Procedures to correct anomalous spinal vertebrae							
	Spinal instrumentation: segmental/non-segmental							
	Vertebral corpectomy							
	Exploration and decompression of spinal canal structures							
	Meningocele and myelomeningocele repair							
	Spinal fusion							
Medical Utilization Metrics	Number of 1) inpatient stays, 2) outpatient visits, 3) emergency department visits, 4) institutional stays, and 5) other ambulatory encounters							
Drug Utilization Metrics	Number of 1) dispensings, 2) unique generics dispensed, and 3) unique drug classes dispensed							

Covariates for Descriptive Purposes Only (did not enter Propensity Score model)

Surgery	27140	Procedure	CPT-4	Osteotomy and transfer of greater trochanter of femur (separate procedure)
Surgery	27146	Procedure	CPT-4	Osteotomy, iliac, acetabular or innominate bone;
Surgery	27147	Procedure	CPT-4	Osteotomy, iliac, acetabular or innominate bone; with open reduction of hip
Surgery	27151	Procedure	CPT-4	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy
Surgery	27156	Procedure	CPT-4	Osteotomy, iliac, acetabular or innominate bone; with femoral osteotomy and with open reduction of hip
Surgery	27157	Procedure	CPT-4	Acetabular Augmentation (wilson Procedure)
Surgery	27158	Procedure	CPT-4	Osteotomy, pelvis, bilateral (eg, congenital malformation)
Surgery	27161	Procedure	CPT-4	Osteotomy, femoral neck (separate procedure)
Surgery	27165	Procedure	CPT-4	Osteotomy, intertrochanteric or subtrochanteric including internal or external fixation and/or cast
Surgery	27170	Procedure	CPT-4	Bone graft, femoral head, neck, intertrochanteric or subtrochanteric area (includes obtaining bone graft)
Surgery	27175	Procedure	CPT-4	Treatment of slipped femoral epiphysis; by traction, without reduction
Surgery	27176	Procedure	CPT-4	Treatment of slipped femoral epiphysis; by single or multiple pinning, in situ
Surgery	27177	Procedure	CPT-4	Open treatment of slipped femoral epiphysis; single or multiple pinning or bone graft (includes obtaining graft)
Surgery	27178	Procedure	CPT-4	Open treatment of slipped femoral epiphysis; closed manipulation with single or multiple pinning
Surgery	27179	Procedure	CPT-4	Open treatment of slipped femoral epiphysis; osteoplasty of femoral neck (Heyman type procedure)
Surgery	27181	Procedure	CPT-4	Open treatment of slipped femoral epiphysis; osteotomy and internal fixation
Surgery	27185	Procedure	CPT-4	Epiphyseal arrest by epiphysiodesis or stapling, greater trochanter of femur
Surgery	27187	Procedure	CPT-4	Prophylactic treatment (nailing, pinning, plating or wiring) with or without methylmethacrylate, femoral neck and proximal femur
Surgery	27202	Procedure	CPT-4	Open treatment of coccygeal fracture
Surgery	27215	Procedure	CPT-4	Open treatment of iliac spine(s), tuberosity avulsion, or iliac wing fracture(s), unilateral, for pelvic bone fracture patterns that do
				not disrupt the pelvic ring, includes internal fixation, when performed
Surgery	27217	Procedure	CPT-4	Open treatment of anterior pelvic bone fracture and/or dislocation for fracture patterns that disrupt the pelvic ring, unilateral,
				includes internal fixation, when performed (includes pubic symphysis and/or ipsilateral superior/inferior rami)
Surgery	27218	Procedure	CPT-4	Open treatment of posterior pelvic bone fracture and/or dislocation, for fracture patterns that disrupt the pelvic ring, unilateral,

Appendix J: Specifications for Request ID cder_mpl2p_wp001_nsdp_v01

The Center for Drug Evaluation and Research (CDER) requested execution of the Cohort Identification and Descriptive Analysis (CIDA) tool, Version 3.3.3, and a Rapid Analytic Development and Response (RADaR) module to investigate the risk of venous thromboembolism (VTE) among new users of continuous and extended combined oral contraceptives (COCs) compared to new users of cyclic COCs. There were a total of 7 scenarios in this request with varying maximum episode durations, exposure groups, exposure incidence criteria, and outcome definitions.

Query Period: May 22, 2007 - September 30, 2015

Coverage Requirement: Medical and Drug Coverage

Enrollment Requirement: 183 Days

Enrollment Gap: 45 Days

Sex/Age Groups: Females aged 18-24, 25-34, and 35-50
